BOOTCAMP PROJECTS

E-commerce

This project allows customers to view the products list, filter them by name and category, add/delete products to a shopping cart, sign up and log in. This was built as a team using

•Git •Git Hub •Git branch, It's fully responsive to any device, we used •create-react-app •react-router •redux •hooks •CSS/sass •API •HTTP methods(post, delete, get). [Repository](#)

Pokedex

Pokedex shows an extensive list of pokemon cards, each one takes you to its respective Pokemon detail page, we can also filter them by type or search them by name. For the layout and styles of this project, I received a previous design in Figma. I also used a

•responsive web design •react hooks(useState, useEffect) •pokeAPI. [Repository](#)

API E-commerce

Create user accounts and encrypt their password, validate users and generate tokens and sends email when the users have registered, create and add products to the cart, validate tokens to get products in the cart and update the cart's products status. It was built with

•NodeJs •Express •JWT •Bcrypt •Sequelize •PostgreSQL [Repository](#)

EDUCATION

Laboratoria

2019-2020

- A front end 6-month Bootcamp simulates a real work environment with teamwork and using Scrum as an agile methodology. I finished it successfully and I acquired a strong ability to work in a team and be self-taught.

Academlo

2021 - 2022

- Academlo computer science it's a full stack bootcamp with live classes and weekly deliverables.
